Imagine if users working with a range of leading search technologies could find content across their entire organization from one client. Tullynore Technologies' SIFT Search Federator makes this possible and users can now find the most relevant results from multiple sources. Furthermore, additional indexing of content or re-architecture is unnecessary. SIFT simply taps into existing search engines, extracts and then merges the results.

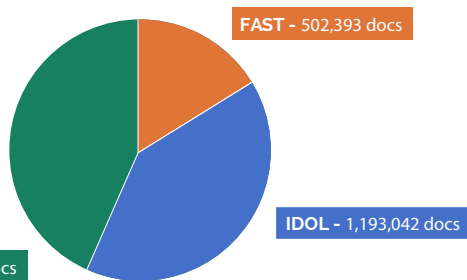

Overview of SIFT

SIFT makes this all possible by intercepting and converting the client's query and passing it to multiple search engines. The federator receives replies from all search engines and merges or concatenates the results into a unified result list. SIFT can then respond in the format according to the client in use. Often, it is better not to attempt merge on relevancy, SIFT however normalizes scores between disparate search engines to provide accurate results on your existing client.

Get the full picture

How do you currently view the status of your entire data infrastructure? As a standalone product, SIFT provides a web administration illustrating the status of all connected engines. Users can access vital information on the entire infrastructure with just a single click.

About Tullynore Technologies

We are market leaders in the provision of document management software and consultancy services. Our range of purpose-built software solutions empower organizations to achieve unparalleled value through enterprise content management and search, eDiscovery, archiving and compliance.

Additional information is available at <http://www.tullynore.com>

Key features

Compatible with an array of leading search technologies – including HP Autonomy IDOL, Apache Solr and Microsoft Search Engine.

Integrates with existing search clients with support for many of the leading HP and Microsoft search interfaces.

Converts index and query responses in real time to formats compatible with each supported platform.

Provides an administrative overview of your search repositories.

Use your existing search client or SIFT's very own search interface.

Supported technologies

Apache Solr

Autonomy IDOL

Microsoft Search Engine

OpenSearch Standard

Customizable and user-friendly

SIFT provides information on all connected search engines in a clear and concise dashboard.

Configured for many leading search technologies and easily customizable for other engines used within your organization.

Complete control over search results with advanced features such as 'Engine Boost'.

As business requirements evolve, easily add or remove fields in one user-friendly administration interface.
